JNJ Expands Their Wipe Line By Introducing New Industrial Grade IPA/DI Water Pre-Saturated Wipes

Franklin, Massachusetts, USA – JNJ Industries' Isopropyl Alcohol and DI Water cleaning wipes bring together the best of traditionally effective Isopropyl Alcohol (IPA) and the latest technology in non-woven, disposable wipe technology. JNJ's IPA and DI (de-ionized) water wipes are pre-saturated, disposable wipes that are conveniently packaged in re-closable dispensers, designed for easy and ready use anywhere they're needed, at the workstation, on the manufacturing line, or in the field.

JNJ's IPA/DI Water wipes have long been used in the electronics industry as a general purpose cleaner, as much for their acceptance by most individuals as being a user friendly and safe cleaner, as for their cleaning effectiveness. And now JNJ has packaged this solution in an industrial grade wipe material, one that is suited for wider range of industrial applications. IPA is a fast drying cleaner, that will remove most light oils, including skin oils from hand prints, as well as many soils and dirt commonly found in most manufacturing environments. In addition to its wide spread appeal for its fast evaporation rate and user friendliness, IPA/DI Water wipes are also reasonable priced, costing less than wipes made using other solvents.

Known as a universal cleaner and disinfectant, the combination forms an azeotrope with water, which evaporates more quickly than water alone for quick and efficient removal of soils and moisture, leaving no residues. They are ideal for use in surface preparation prior to assembly processes that require various bonding agents such as glues and epoxies, or prior to painting or other surface finishes. IPA/DI Water is CFC and HCFC-free, non-aggressive, quick drying, with only a mild odor. JNJ's formulation removes most types of inks, pastes, light oils and contaminants associated with assembly, machining, soldering, printing and most industrial manufacturing applications.

JNJ combines this cleaning solution with its well-known tough, lint-free, non-woven, wipes that offer the right balance of strength and absorptivity. They won't scratch soft surfaces yet have a sufficiently active texture to clean surfaces of soil and dirt. They are lint-free and resist tearing and shredding.

JNJ's IPA/DI Water wipes are part of JNJ's environmentally safe GlobalTech® SuperSaturated SmartWipes® family of products. These wipes are available in 20 and 100 count re-closable canister dispensers.
